we can "cancel" any units that are both top and bottom: So, 3 km equals 3000 m Well, we knew that, but i wanted to show you how to do it systematically, so that when things get harder you will know what to do! And the trick is to know that you will cancel when you finish, so make sure you write the conversion the correct way around (so you can cancel afterwards).. Doing it wrong (with the conversion upside down) gets this: And that doesn't let us do any cancelling! Let's use this method to solve the km/h to m/s conversion from the top of the page.. All In One Go With experience you can do it in one line like this: Or even "all in one go" (crossing out as you go) like this: Now let's use this method to do a real-world conversion.

1. [ticks hours](#)
2. [matplotlib ticks hours](#)
3. [nike ticks 10 hours](#)

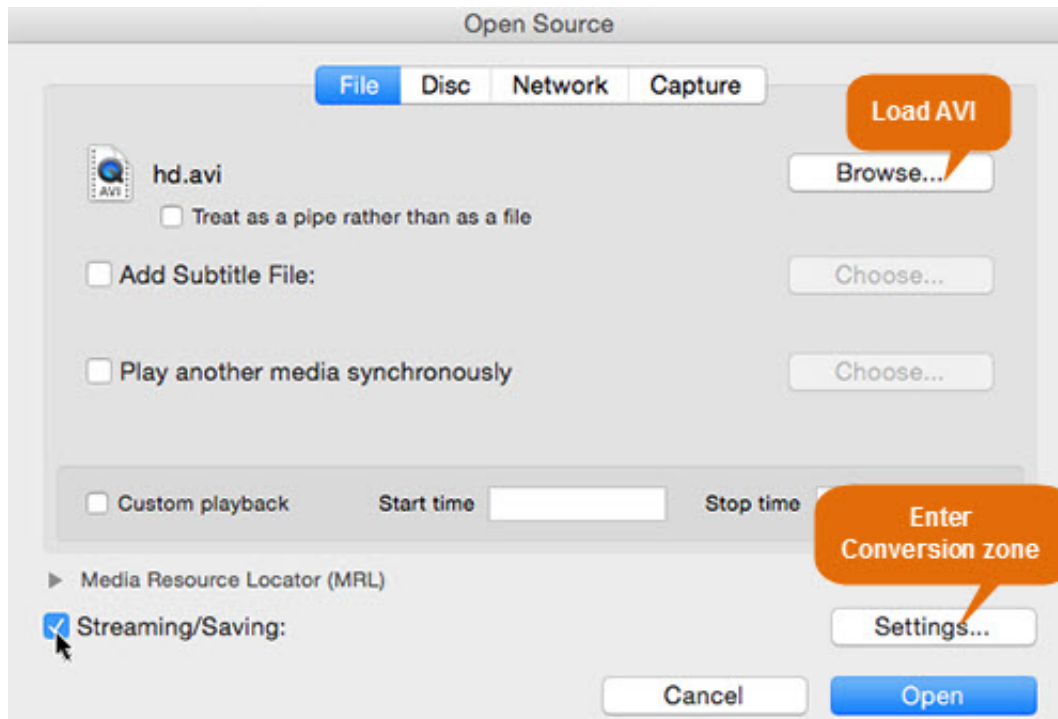

Doing it wrong (with the conversion upside down) gets this: And that doesn't let us do any cancelling! Let's use this method to solve the km/h to m/s conversion from the top of the page.. From m/h (meters per hour) to m/s (meters per second) Now, to go from m/h (meters per hour) to m/s (meters per second) we put the "3600 seconds in an hour" conversion "upside down" because we want an "h" on top (so they will cancel later) : Then "cancel out" any units that are both top and bottom: And so our answer is: Doing it wrong (with the the 3600 seconds/hour the other way around) gets this: And there is nothing to cancel! So we know we made a mistake, and can correct it.

ticks hours

ticks hours, clock ticks hours, matplotlib ticks hours, ticks to hours converter, nike ticks 10 hours, c# ticks to hours, how many ticks in 24 hours, ticks 24 hours, how big are ticks after 24 hours, sql ticks to hours, ticks to hours c#, ticks 36 hours, ticks first 24 hours, what time are ticks most active, what is a tick time

What is 60 mph (miles per hour) in m/s (meters per second) ? The important points are: Write the conversion as a fraction (that equals one) Multiply it out (leaving all units in the answer) Cancel any units that are both top and bottom How to Safely Convert From One Unit to Another We can convert from km/h (kilometers per hour) to m/s (meters per second) like this: A kilometer has 1000 meters, and an hour has 3600 seconds, so a kilometer per hour is: How did I know to make it 1000 / 3600, and not 3600 / 1000 (the other way around)? The trick is to do the conversions as fractions! Let's start with a simple example: convert 3 km to m (3 kilometers to meters).. What is 60 mph (miles per hour) in m/s (meters per second) ? The important points are: Write the conversion as a fraction (that equals one) Multiply it out (leaving all units in the answer) Cancel any units that are both top and bottom.. There are 1000 m in 1 km, so the conversion is easy, but let's follow a system Write the conversion as a fraction Multiply Cancel any units that are both top and bottom You can write the conversion as a fraction that equals 1: And it is safe to multiply by 1 (does not affect the answer) so we can do this: The answer looks strange! But we aren't finished yet.. All In One Go With experience you can do it in one line like this: Or even "all in one go" (crossing out as you go) like this: Now let's use this method to do a real-world conversion..
